

BLACK BUTTE REHABILITATION PROJECT – PHASE A

The California Department of Transportation will begin rehabilitation of pavement on Interstate 5 northbound lanes from just north of the Lassen Lane overcrossing in Mt. Shasta to just south of the South Weed undercrossing. A four-inch asphalt concrete overlay will be applied and shoulders will be widened at multiple locations. The northbound North Mt. Shasta onramp will be reconstructed. Limited work will occur in the southbound slow lane. The job includes shoulder widening, upgrade of onramp lighting, drainage, replacement of guard railing, roadside signs and weed barrier. Project costs are estimated at \$14 million. The contractor is J.F. Shea, Inc. of Redding.

Construction is anticipated to begin in early May and be completed in November 2006. Work will take place from 6 a.m. to 6 p.m., Monday through Friday; weekend and night work may be possible. Expect short delays as traffic will be reduced to one lane in the work area; ramp closures with detours will be available.

Traffic will be controlled with changeable message signs, stage construction, traffic surveillance and temporary lane closures. The California Highway Patrol will be on site.

Phase B, scheduled for 2008, will include finishing the roadwork on the southbound lanes and bridge work both northbound and southbound.
